Effective September 1, 2007, excavators are subject to the requirements of Chapter 18 of the Railroad Commission of Texas. The rule requires excavators to take additional damage prevention and safety measures when excavating near a pipeline. An example of some of the new requirements include, but are not limited to, white lining the area to be excavated when the location of an excavation is unclear, providing the method of positive response to the one-call center, making a second notice to the one-call center if a positive response is not made or evidence of a of pipeline is present, and taking additional safety measures when excavating within the tolerance zone. The rule has very limited exemptions, mandatory non-compliance reporting and enforcement of fines and penalties. All excavators should review the new rule requirements.

\* Gardening only \*\* Public ROW only
